

PROFESSIONAL SUMMARY

Senior Backend Developer and technical leader with 14 years of experience building distributed systems across financial, pharmaceutical, real estate, e-commerce, banking, and insurance domains. Two-time ACM ICPC South America Honorable Mention.

Known as the bridge between engineering and business: translating complex technical decisions into language stakeholders understand, and turning business requirements into precise technical roadmaps. Proven team lead — managed teams up to 18 — with a strong record of mentoring engineers, owning client relationships, and implementing agile from scratch.

Committed to continuous advancement in AI-augmented engineering: self-hosts a local LLM inference stack (Ollama + LiteLLM, 35B-parameter models, dual RTX 5060 Ti), integrates AI tooling at every layer of the development workflow, and actively builds on the emerging Model Context Protocol ecosystem.

TECH STACK

EXPERT	TypeScript · MySQL · PHP · C# · .NET Core
PROFICIENT	Node.js · NestJS · PostgreSQL · MongoDB · Laravel · Kubernetes · Docker · GraphQL · CQRS · Event-driven Architecture · Microservices · RabbitMQ · SQS · RESTful / HATEOAS
FAMILIAR	AWS Lambda · AWS DynamoDB · AWS EC2 · Apache TinkerPop · Azure · Rackspace
AI / ML	Model Context Protocol (MCP) · Anthropic Claude API · Ollama · LiteLLM · Cursor IDE — <i>Self-hosted: Qwen3 35B MoE + Qwen2.5-Coder 14B on dual RTX 5060 Ti (32GB VRAM)</i>
INTEGRATIONS	Auth0 · HubSpot · Twilio · SendGrid · Contentful

CORE STRENGTHS

TECH-BUSINESS BRIDGE • Explains architecture decisions to CTOs and database migrations to non-technical clients without losing either audience. Builds lasting technical intuition in stakeholders, not just immediate understanding.

TEAM LEADERSHIP • Built and led teams from 2 to 18. At PPM, restructured into rotating 4-person cells — every engineer rotated as team lead, creating distributed ownership and individual growth paths.

CLIENT OWNERSHIP • Full client relationship management end-to-end: intake, scoping, sprint communication, delivery. Clients rarely escalated because expectations were set and maintained from day one.

AI-FRONTIER ENGINEERING • Not a passive user — an active builder. Runs 35B-parameter models locally, published an open-source MCP server, and continuously tracks the AI tooling frontier.

PEOPLE DEVELOPMENT • Designs individual career paths based on skill qualification mapping against job position requirements. Runs structured performance reviews and delivers direct, actionable feedback. Grows engineers into leads — not just better coders.

WORK EXPERIENCE

Senior Backend Developer

Ballast Lane Applications • Remote, Boston USA

- ▶ Contributing to the AI-assisted migration of a legacy monolith onto an event-driven CQRS architecture — DynamoDB write source-of-truth with AWS Lambda triggers synchronizing state to PostgreSQL read models.
- ▶ Delivered software architecture design, new product implementation, and continuous development across financial, pharmaceutical, and real estate client platforms.
- ▶ Integrated third-party services — Auth0, HubSpot, Twilio, SendGrid, Contentful — across multiple client platforms.
- ▶ Operate a fully AI-augmented development workflow: 100% Cursor IDE with agentic context, custom knowledge base tooling, and continuous integration of emerging AI capabilities into team processes.
- ▶ Deployed and maintained microservices on Kubernetes, leveraging SQS and RabbitMQ for resilient asynchronous messaging.

Nov 2021 – Present

Trade Systems • Quito, Ecuador

- ▶ Led a 5-person backend team through full product delivery cycles, from technical design to client handoff.
- ▶ Served as the primary interface between clients and the engineering team — translating requirements into roadmaps and explaining architectural trade-offs in plain language.
- ▶ Onboarded and mentored new engineers through structured onboarding and pair programming, reducing ramp-up time and building team autonomy.

Senior Developer

Mar – Oct 2020

Skypostal • Remote, Miami USA

- ▶ Designed and implemented a reports module surfacing real-time SLA metrics for logistics providers, giving operations teams direct visibility into service performance.

Chief Developer

Dec 2017 – Mar 2020

PPM • Quito, Ecuador • Team of 18

- ▶ Scaled an 18-person engineering organization by restructuring into rotating 4-person cells, distributing decision-making authority and creating leadership opportunities for every engineer.
- ▶ Implemented Agile methodology across a previously ad-hoc development process, improving delivery predictability across multiple concurrent client projects.
- ▶ Resolved a critical banking data processing bottleneck: replaced PHP-based CSV ingestion with MySQL LOAD DATA INFILE + stored procedures + triggers, enabling reliable processing of banking files previously impossible to handle at scale.
- ▶ Owned software architecture design, time estimation, talent allocation, and client relationship management across all active projects.

Senior Developer

Feb 2014 – Dec 2017

PPM • Quito, Ecuador

- ▶ Achieved a 90% reduction in query response time on a high-frequency banking reporting module by eliminating an index bypass through string-based substring matching.
- ▶ Designed and maintained loyalty programs for banking, insurance, and e-commerce clients, supporting high-volume transaction processing.
- ▶ Designed relational database schemas for multiple client platforms, ensuring normalization, query efficiency, and long-term maintainability.

Developer

Sep 2011 – Feb 2014

Crifa CIA. Ltda. • Quito, Ecuador

- ▶ Built a full bar administration system: recipe management, multi-level inventory control, and unit transformation logic (e.g., one bottle = 12 shot glasses), enabling real-time cost tracking and stock visibility.
- ▶ Designed and developed a movie theater management platform: film cataloging, schedule administration, online payment, multi-format access (mobile, desktop, self-service kiosk), and an interactive room mapping module powering numbered seat selection.

PROJECTS**knowledge-mcp • Open Source • TypeScript, Node.js, Anthropic SDK, MCP SDK**

Built and published a globally-installable MCP server enabling AI coding agents to maintain structured knowledge bases. 9 tools covering design, generation, semantic search, and planning. Integrates Anthropic Claude API and local Ollama models.

Amazon Product Data Integration • Personal Freelance • NestJS, C# .NET 8, MongoDB, Docker, Rainforest API

Designed and delivered a full-scale e-commerce product data pipeline: NestJS (TypeScript) service syncing Rainforest API data into MongoDB and pushing structured records to an e-commerce platform via batch API. Rewrote the sync layer in C# .NET 8 with multi-threaded parallel batch workers, cursor-based resumption for fault tolerance, and thread-safe auth token caching via SemaphoreSlim.

EDUCATION**Systems Engineer**

Pontificia Universidad Católica del Ecuador (PUCE)
Quito, Ecuador • 2007 – 2013

CERTIFICATIONS & ACHIEVEMENTS

AWS Cloud Practitioner — November 2024

ACM ICPC South America — Honorable Mention —
Bogotá, 2009
